

Safe. Secure. Trustworthy.

Offering a Customized Cyber Security Roadmap Service

Cyber Security Roadmap Service ■ Protecting You From Threats

Understanding the cyber security threats to your organization can be a daunting task. It's such a broad topic that it's beyond just doing a vulnerability scan. It takes understanding current and evolving threats and truly understanding your business and how you handle data.

We Will Completely Assess Your Organization

V-Soft Consulting has developed an all-inclusive cyber security roadmap product that will uncover weaknesses both inside and outside of your company. Engineers will perform scans, conduct oral interviews, and provide a complete report on vulnerabilities and recommend remediation steps in order of severity.

Assessments Included

- Premium Vulnerability Scanning (Unlimited internal/external IPs)
- Assessment based on NIST Cyber Security Framework - a top to bottom review
- Detailed evaluation without any agents installed
- Scan of internal network for sensitive information
- Expose security threats and mishandling of sensitive data
- Review of IT policies and procedures

Additional Evaluation Topics

- Complete external vulnerability scan
- Security policy use evaluation
- Share report showing shares and who is using them
- Outbound security report
- Compare your company's security with national standards like NIST 800-52 and the National Cyber Security Framework
- Issues and remediations listed in the order of criticality

“I want to compliment V-Soft and their team of cyber security experts for developing a roadmap to assure ongoing threat prevention and regulatory compliance for both our company and customers.”
