Secure Desktop Management, Simplified

DaaS Solutions for Service Providers

Desktop as a Service Solutions | Secure Desktop Management, Simplified

In an increasingly mobile world, businesses and providers search for new ways to manage the Bring Your Own Device (BYOD) movement that also address growing data security concerns. With DaaS, deployment and management of the desktop environment is simplified.

How DaaS Works

Data and applications are accessed through a virtual environment, allowing businesses and providers to support, patch, and maintain a single environment rather than numerous individual desktops. With one central environment, your data is more secure while still allowing users the flexibility to choose between working on desktop or mobile devices.

DaaS Provides:

- Extended life of existing desktop hardware
- Solution for security and compliance concerns; all data is cloud hosted and desktops are based on easy-to-manage patterns
- Dedicated desktop resources with greater availability than session-based remote desktops
- Secure remote access
- Consistent desktop experience
- Accessible from any device that you support, including Windows-based, iOS, Android, and Mac OS

> *"I want to reiterate what a pleasure it has been working with [V-Soft]. They have built a very high quality team."*
>
> Jesse B., IT Enterprise Development Manager

Manage More With Less

The popularity of DaaS is growing primarily because of its ability to make IT providers faster and more efficient. Instead of supporting and maintaining desktops on a 1:1 basis, you can update the base desktop image using a 1:many approach. **This allows you to onboard new users faster and support existing desktops more efficiently with application updates and fixes.**

DaaS is also an attractive security option because data and applications reside in the cloud rather than on end-user devices, which can be easy targets due to insufficient security tools or practices. Finally, because every user's environment is virtual, desktop images are automatically synced and always available. DaaS simplifies desktop management so that you can manage more with less.

Why Choose V-Soft?

V-Soft's DaaS solution provides the virtual infrastructure and desktop experience to complement your IaaS solution. We enable user access from their endpoint device while you decide what clients will use to access their remote virtual desktops. Bottom line, you have options to build your solution to fit your business and your client's requirements.

- Built using either a Windows 2008 or 2012 server
- Provides a Windows 7 or Windows 8 experience
- Encourages a more productive and cost-effective workplace
- You decide what clients will use to access their remote desktops
- Support for computers, tablets, smart phones, and more

Service Delivery Options ▪ Tailored to Your Needs

- **Virtual Desktops:** Dynamic or Static Desktop options
- **Customer Service:** Partner technical support included
- **Desktop Templates:** Initial template (gold pattern) creation and customization for up to 2 patterns
- **Deployment Training:** Included
- **Network and Security:** V-Soft will provide basic networking configuration as part of the initial product setup. *An additional Network and Security bundle is required for each new tenant.*
