V-Soft's Infrastructure Solutions

The V-Soft team of experts offers industry-leading collaboration and tech-driven solutions, while maintaining a client-centric approach to deliver reliable, scalable and cost-efficient results.

Structured Cabling

V-Soft provides full-scale design, engineering and implementation of low-voltage structured cabling systems with a team of highly-accredited RCDDs. This team collaborates with your decision-makers to understand your goals, to future-proof installations and meet budgets and timelines.

Wireless

V-Soft provides wireless services ranging from AP grid design, wireless site/performance assessments, mounting, configuration, intelligent Wi-Fi and access controls. These services help to ensure organization security and maximum productivity.

Door Access

V-Soft's RCDD engineers design and implement door access systems for small offices to multi-site buildings needing to utilize LAN and/or WAN connectivity for administration, connecting to your Active Directory. Contactless options are available for health and safety.

Camera Systems

V-Soft's RCDDs design and implement camera systems for small offices to multi-site buildings needing to utilize LAN and/or WAN connectivity for administration. Cloud solutions are also available to reduce hardware overhead and improve security.

POE Lighting

V-Soft provides a substantial ROI with PoE (Power Over Ethernet) Lighting. LED lights are supplied power through PoE rather than traditional AC power, saving your company 50% or more on energy costs while empowering your ability to manage lighting through your data system.

Network Design Services

V-Soft RCDD engineers design and quality control your low-voltage cabling projects. With a full complement of design engineers, the team ensures your infrastructure is designed to your specifications, adheres to codes and performs for years to come.
